Thai Good News

Sidebar Features — User Manual

Table of Contents

1. Search

2. Sign Language Video

3. My Favorites

4. My Notes

5. Selected Messages

6. My Library

7. Storage Management

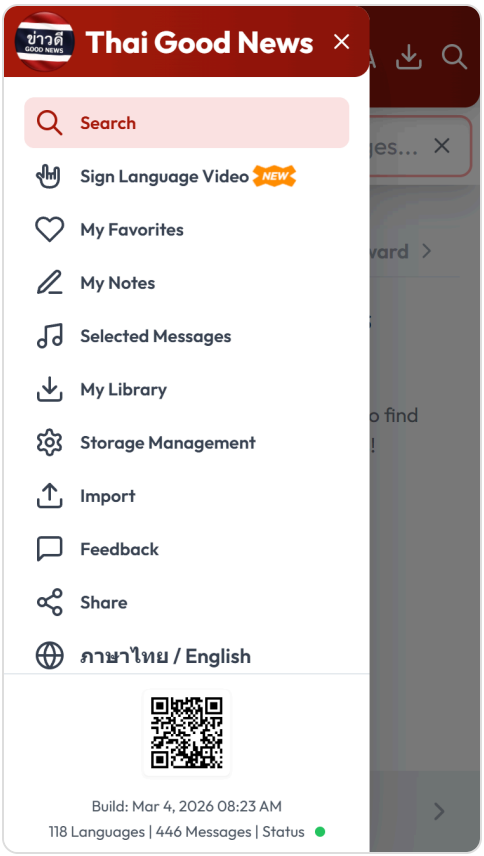
8. Import

9. Feedback

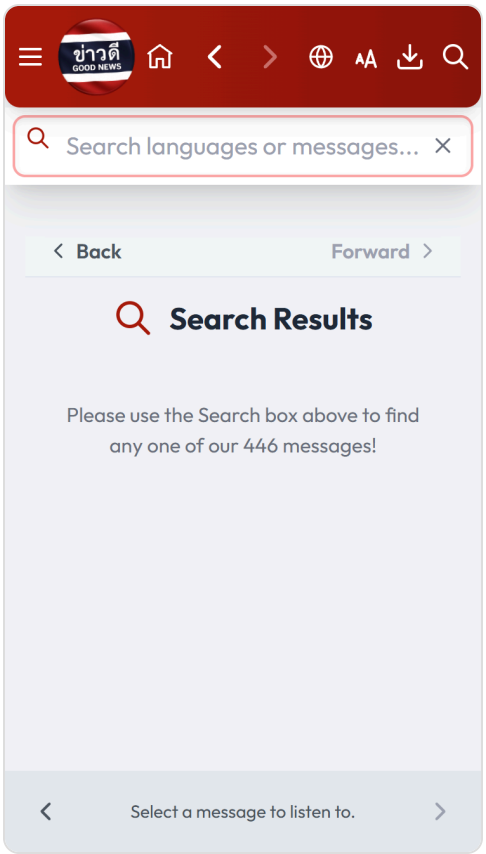
10. Share App

1. Search

Instead of scrolling through the 100+ languages on the Home screen, type a language name, a message title, or a keyword here to find exactly what you need instantly.



① Select "Search" in Sidebar



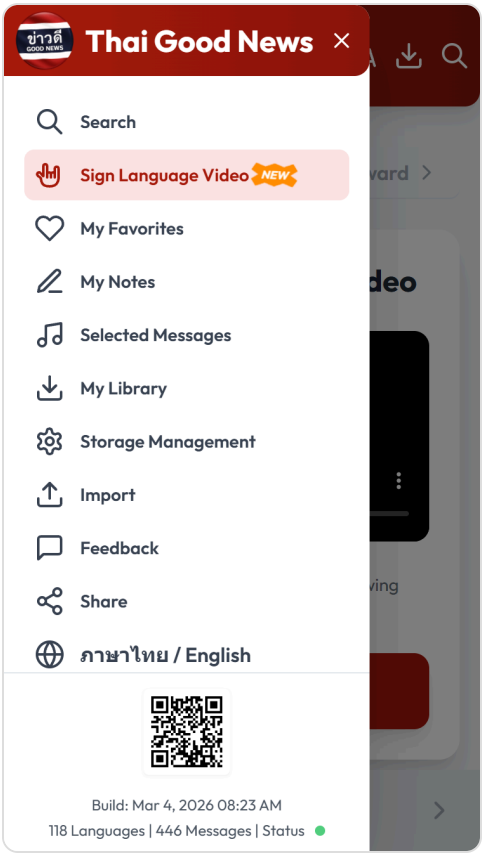
② Search Page Opens

Example Usage:

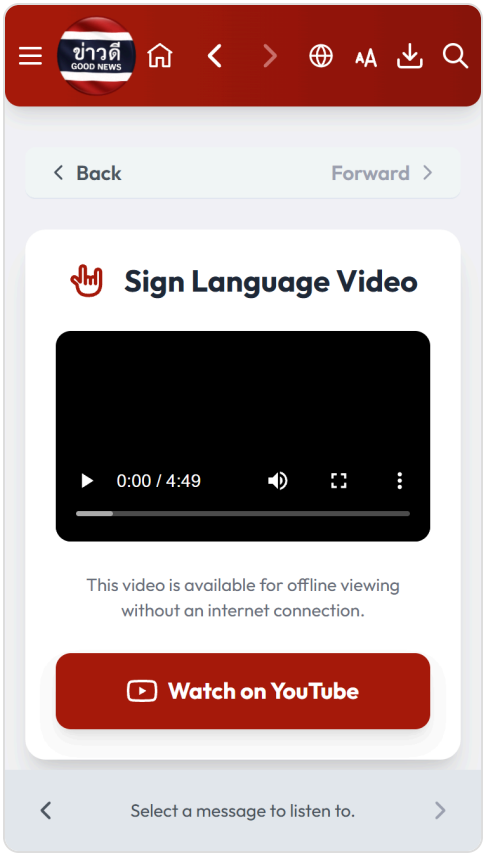
You just met someone who speaks "Isan" but can't find it in the long list. Open **Search**, type "Isan", and tap it instantly to load all their native messages.

2. Sign Language Video

A dedicated page that provides quick access to visual Good News content specifically tailored for the Deaf community in Thailand.



① Select "Sign Language Video"



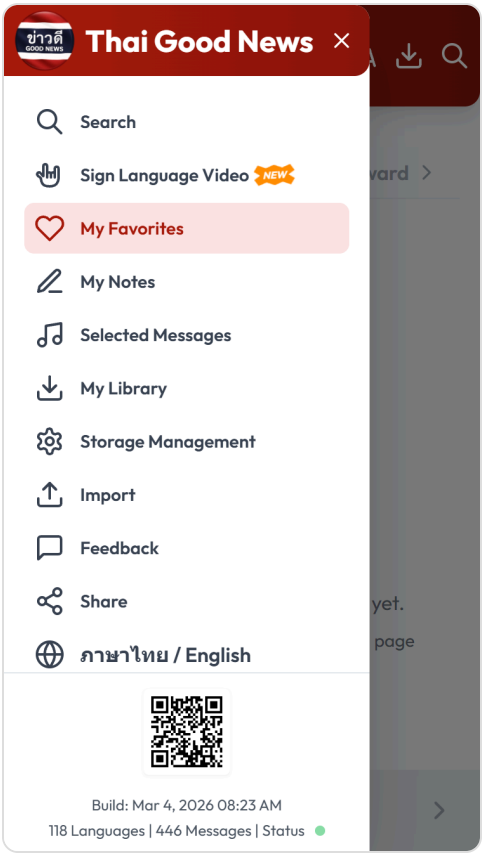
② View Visual Content

Example Usage:

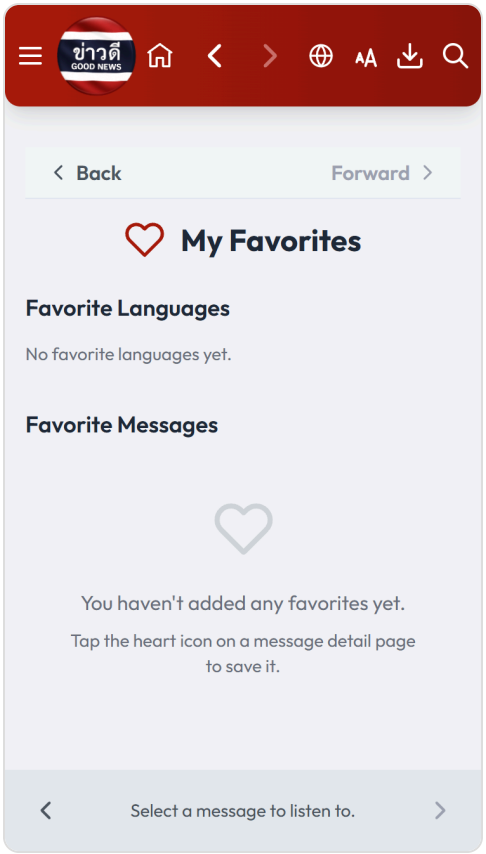
You meet someone who is deaf. Instead of writing back and forth, open the Sidebar, click **Sign Language Video**, and instantly show them the life-changing message in their own language.

3. My Favorites

A quick-bookmark page. Find a language you use often or a message you love? Tap the “Heart” icon and it is saved here — no more searching.



① Select "My Favorites"



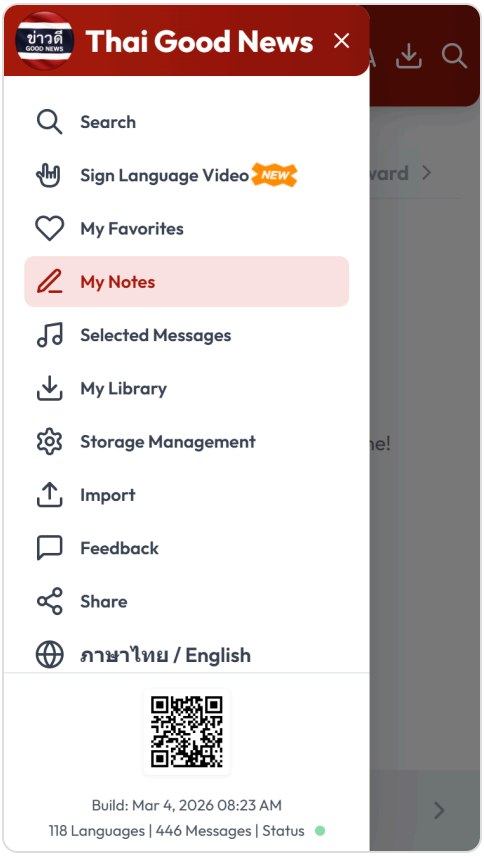
② Saved Content Library

Example Usage:

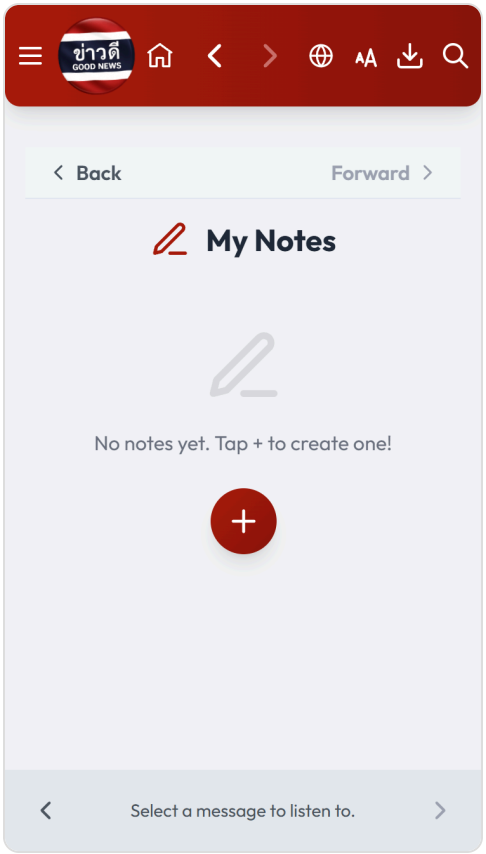
Planning a trip to the Karen community? Favorite the "Karen" language folder so it sits right at the top of **My Favorites** for instant daily access.

4. My Notes

A private journaling space. Jot down thoughts, sermon notes, or personal reminders about who you want to share a specific message with.



① Select "My Notes"



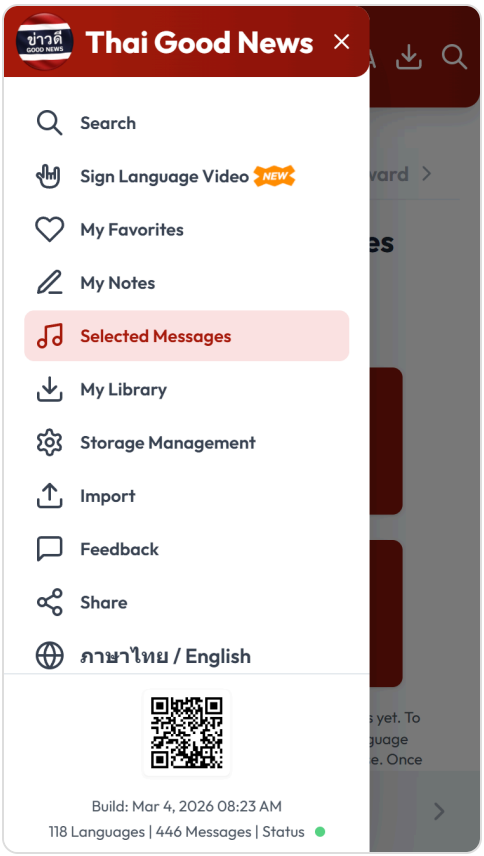
② Read & Write Notes

Example Usage:

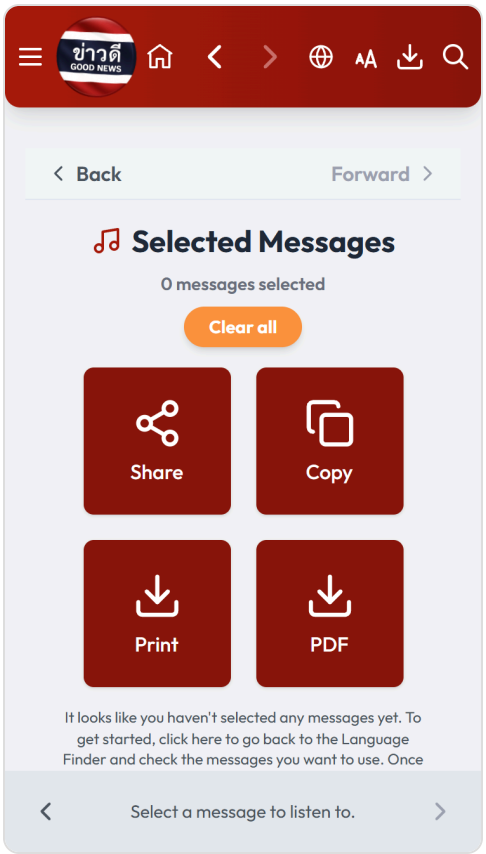
While listening to a teaching on forgiveness, a friend comes to mind. Open **My Notes** and jot down: *"Share Words of Life track 5 with Somchai tomorrow at the coffee shop."*

5. Selected Messages

Think of this as your **"Shopping Cart" for Sharing**. Check the boxes next to messages across multiple languages as you browse. This page gathers them all into one clean list for copying, sharing, or printing QR cards.



① Select "Selected Messages"



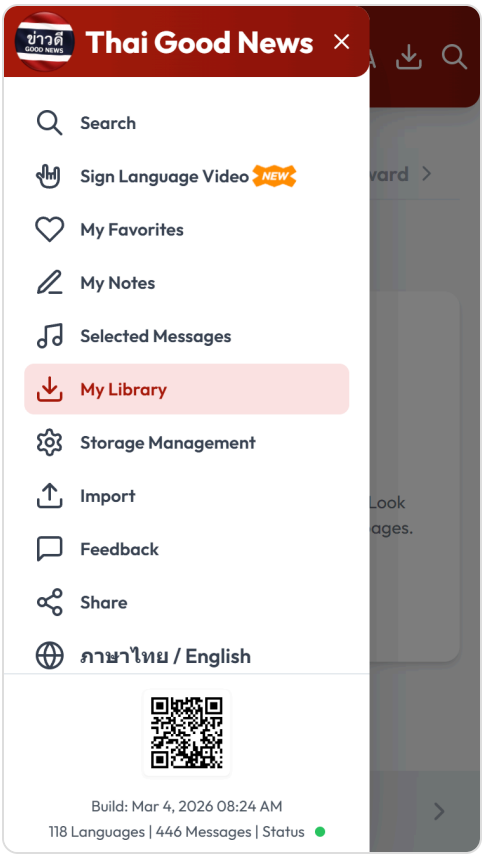
② Review Selected Messages

Example Usage:

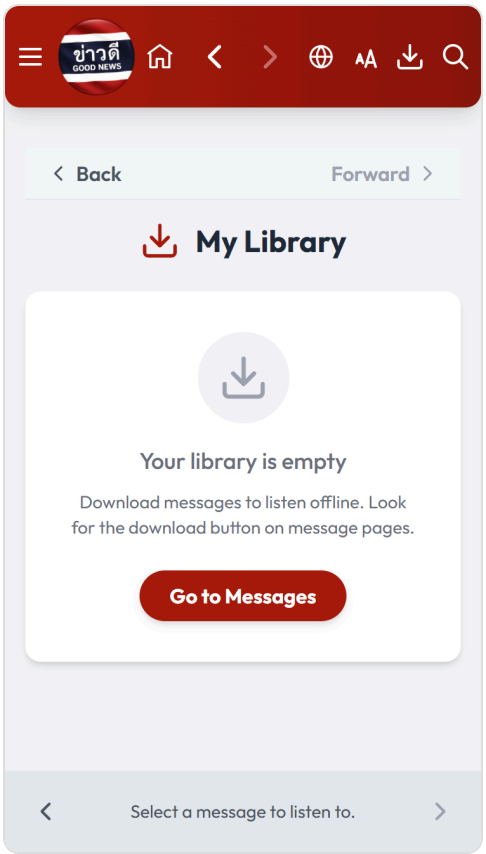
Hosting an event? Browse the app and check Thai, Isan, and English messages. Go to **Selected Messages**, tap "Print", and generate QR cards to hand out to every attendee.

6. My Library

This is where offline audio lives. When you tap "Download" on any audio track, it is saved directly to your phone. Open My Library anytime — even with no internet connection.



① Select "My Library"



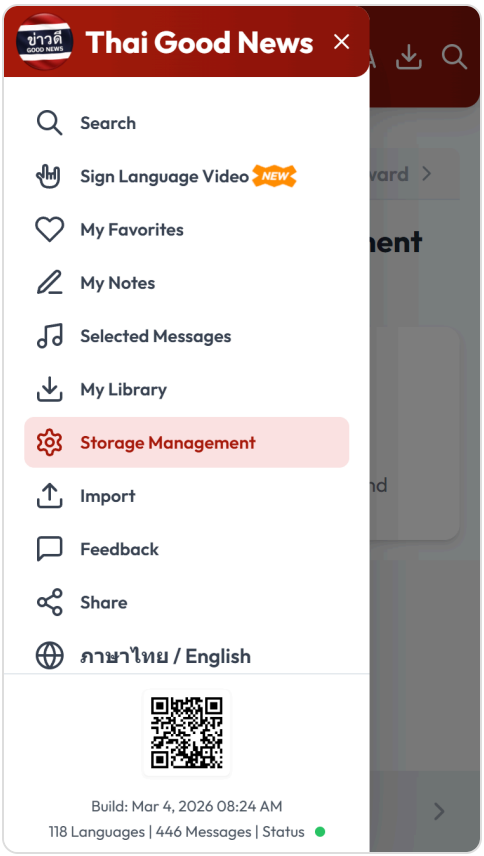
② Play Offline Audio

Example Usage:

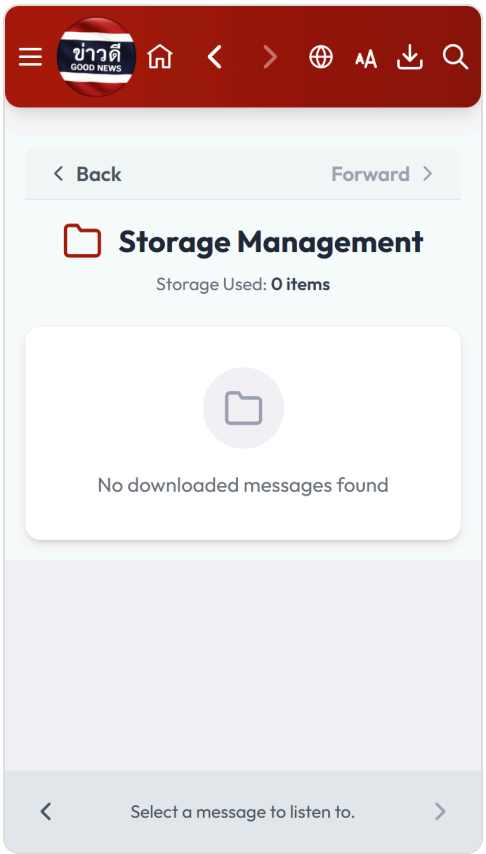
Traveling to a remote village with no cellular data? Before leaving WiFi, download 10 audio tracks. At the village, open **My Library** and play them with zero signal.

7. Storage Management

Audio files take up space on your phone. This page shows how much space your downloads are using and lets you quickly delete old tracks to free up storage.



① Select "Storage Management"



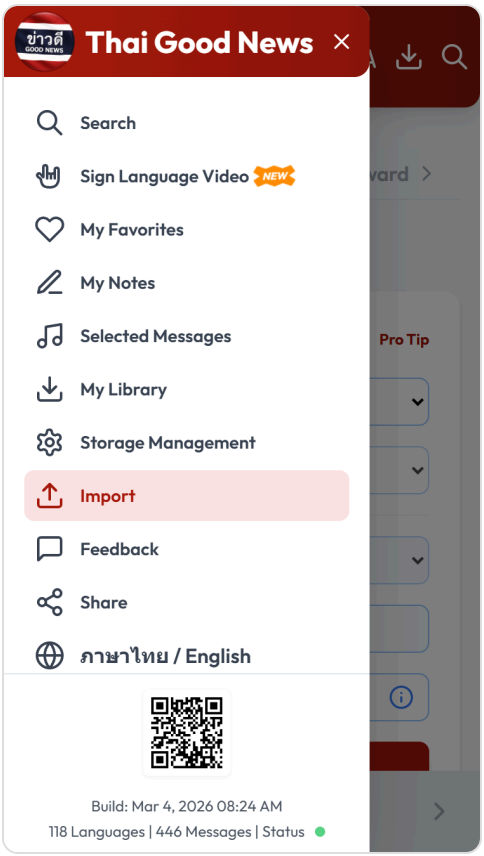
② Free Up Space

Example Usage:

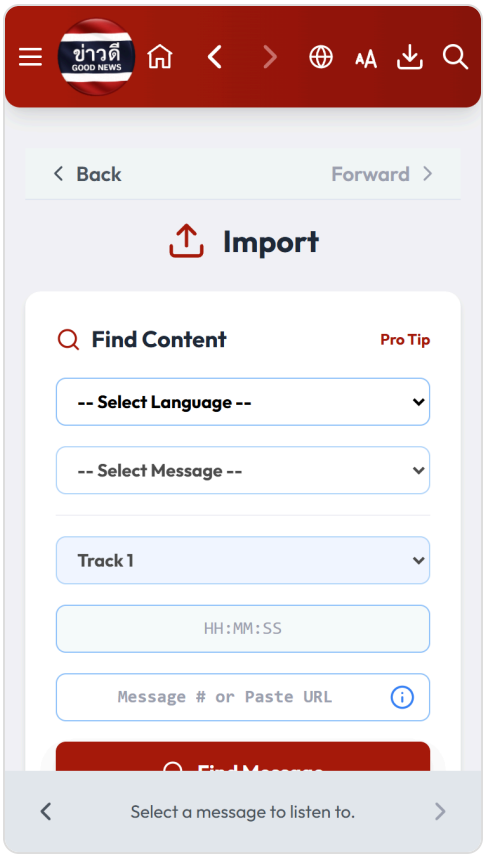
Your phone says "Storage Almost Full." Open **Storage Management**, see 50 old messages from a trip last year, and click "Delete All" to instantly reclaim that space.

8. Import

A "Power User" tool. The app contains a curated list of messages, but Global Recordings Network (GRN) has thousands more. Find a Program ID on the GRN website and type it here to import it.



① Select "Import"



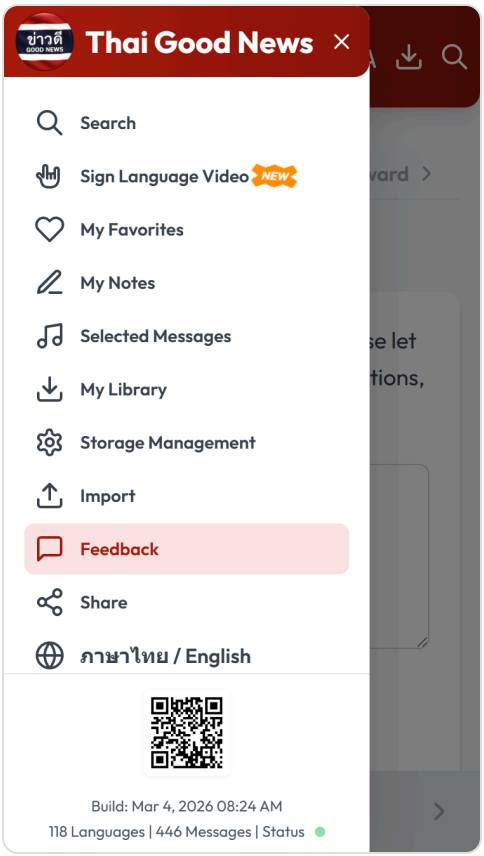
② Import New Content

Example Usage:

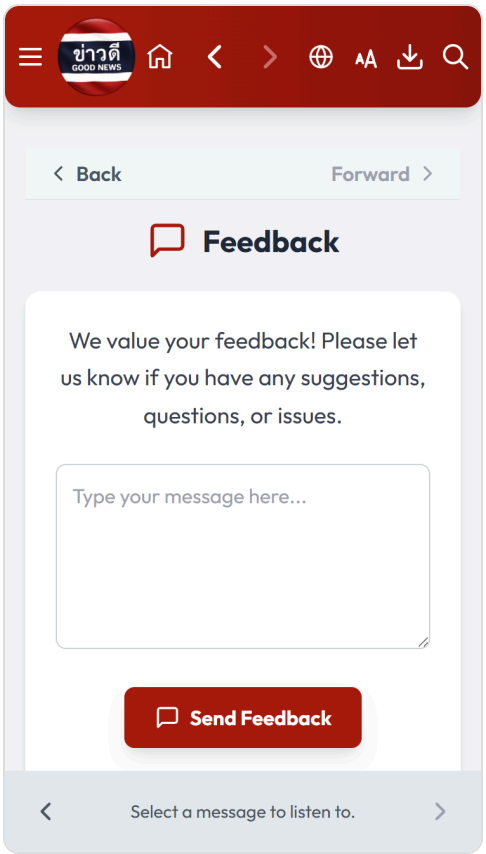
Someone asks for a rare dialect not in the main list. Search the GRN website, find Program ID 62808, and type it into **Import**. The app pulls it in for both listening and sharing.

9. Feedback

A simple contact form. It pre-fills an email to the development team so you can easily send bug reports, questions, or feature requests with just a few taps.



① Select "Feedback"



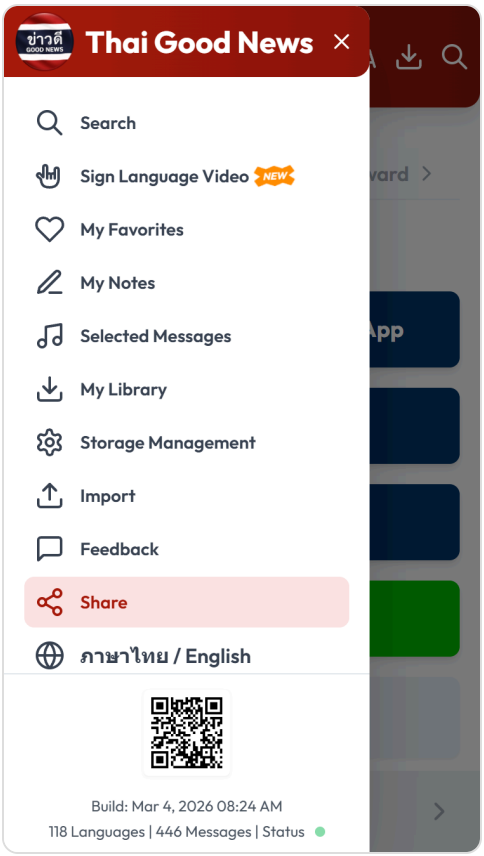
② Contact Developers

Example Usage:

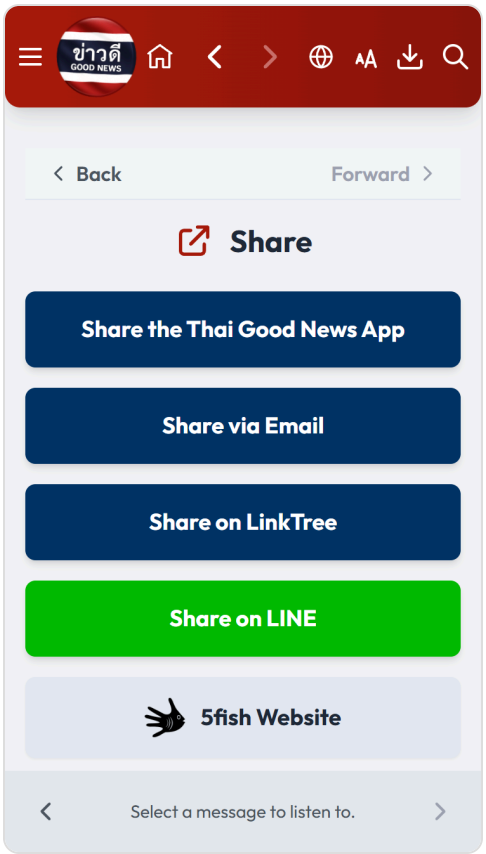
You notice a translation phrase sounds awkward, or you have a great new feature idea. Open **Feedback**, type your thoughts, and hit send!

10. Share App

While individual message pages let you share *one audio track*, **this page shares the App itself**. Send the install link via Email, LINE, LinkTree, or your device's native share sheet.



① Select "Share" App



② App Share Links

Example Usage:

A friend asks "How do I get that app?" You open the Sidebar, click **Share**, tap the LINE button, and instantly ping them the install link.
